MapReduce, via Playing Cards

Let's count the number of spades, clubs, hearts, and diamonds in a stack of cards, the way map reduce would.

- Each card represents a row of data
- Each suit & number represents an attribute of the data

Execution Engine: Tez

The Stinger Initiative

2011, the world got together and declared MapReduce to be terrible.

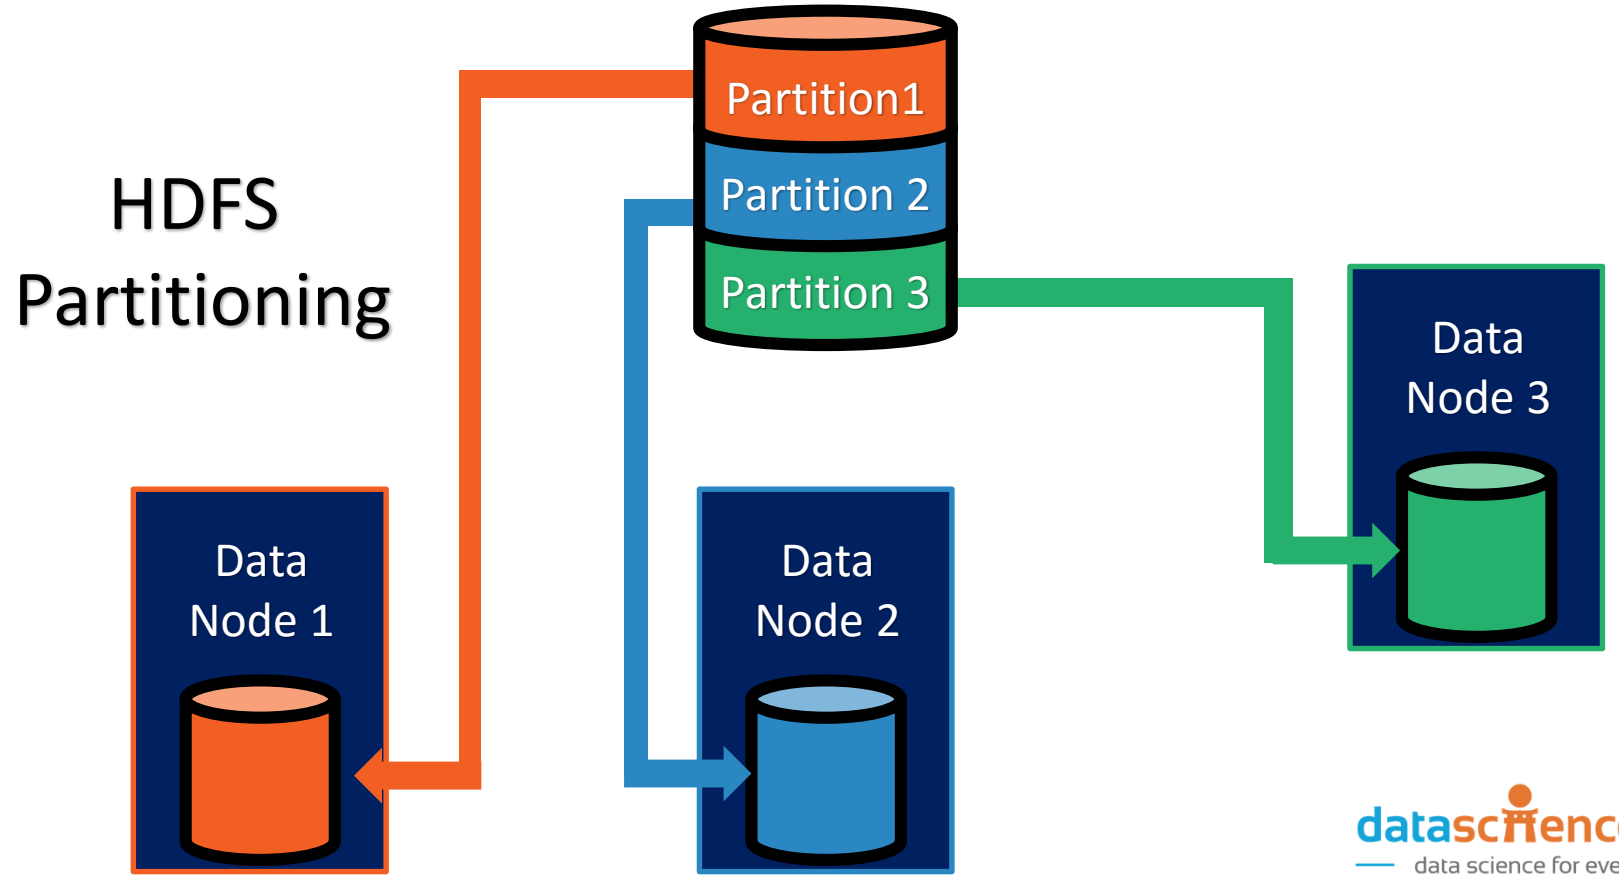
- 44 companies
- 145 developers
- 392k lines of Java code

Hadoop 2.0 with Yarn & Tez

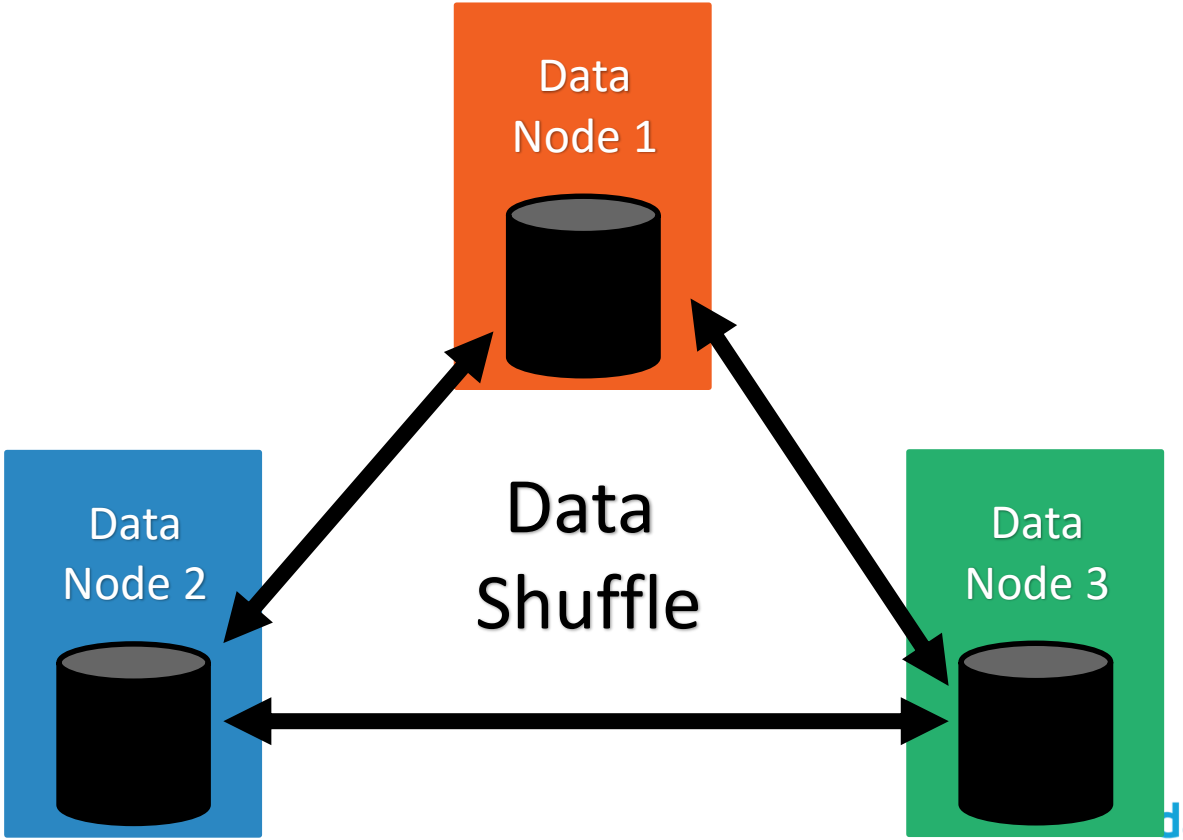
- Tez dropped hive query times by **90%, 100x performance**
- Utilizes Apache Yarn
  - Yarn: resource manager for multi-cluster computing
- Introduced partial in-memory, local head nodes
- Rewrote HiveQL as an actual language, instead of translation

- Distributed Machine Learning
- Installed into Hadoop & Spark
- R-like language Implementation

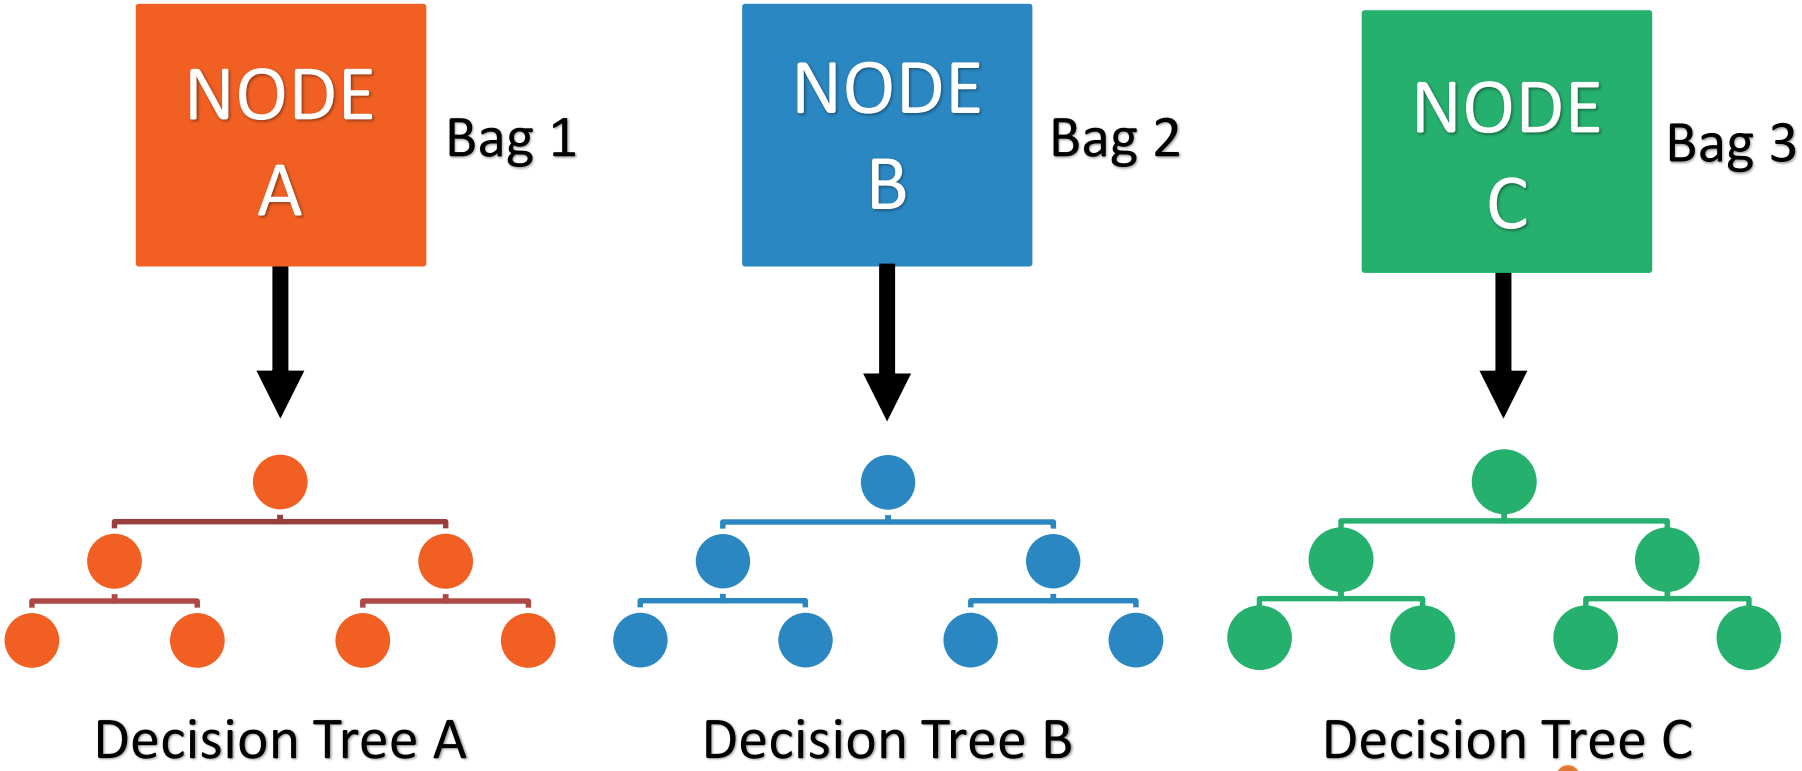
Distributed Random Forest



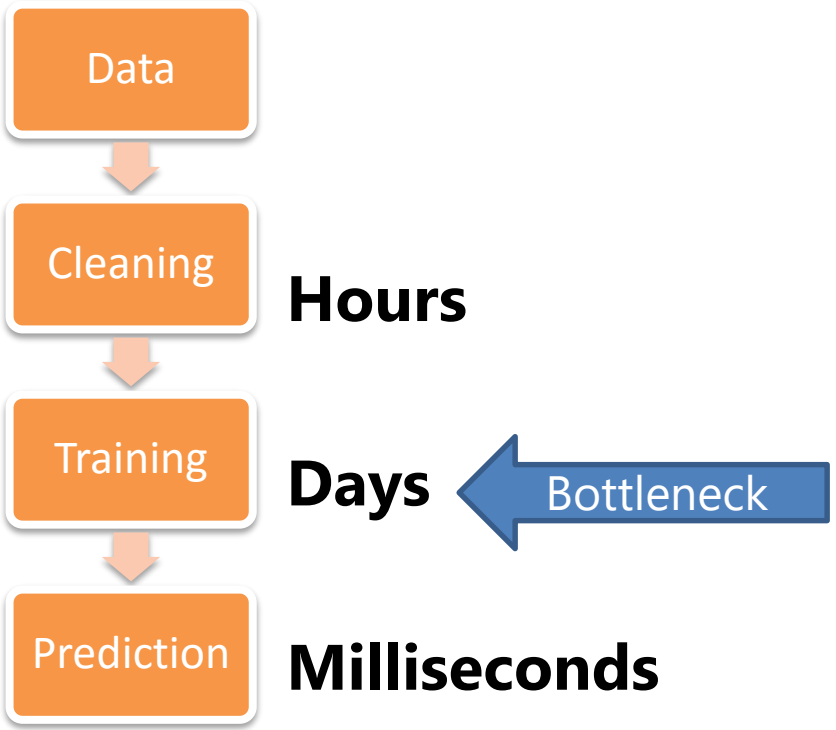
Distributed Random Forest



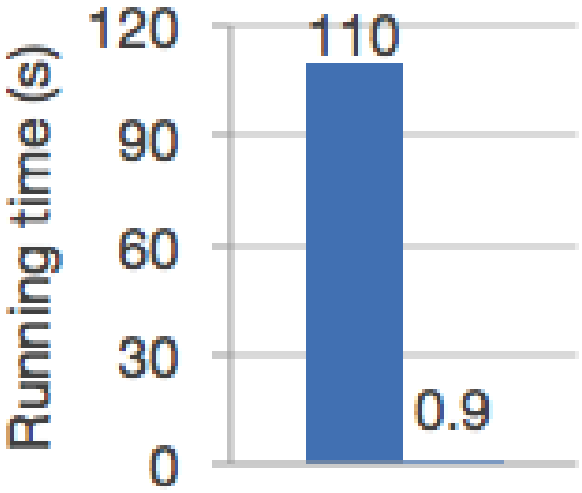
Distributed Random Forest



Processing Times - Machine Learning



- Large scale systems are only needed for training
- Phones can use models outputted by mahout to predict new data
- After a model is trained, save the model to any IO file type and reload it where you want



In-Memory: 100x times faster than Hadoop

3x faster on 10x few machines

Datona GraySort Benchmark: Sort 100 TB of data
